project : Diversity and OSS Sustainability

Project Execution

Problem There are very few women and minorities contributing to open source project. Does this affect software success and sustainability?	Solution Get github data, analyze, make suggestions	Unique Value Proposition Understand the effect of a diverse, inclusive group of contributors on a open source software. Exploratory and first round of analysis should be done with enough information to provide a report.	
	Key Metrics Sustainability: time, number of downloads, stars Diversity: gender, ethnicity?	User Profiles Target audience and early adopters Other open source contributors and scientists.	User Channels Highlight the importance of understanding our own community
	Resources Required Data source, analysis plan, clear hypothesis, clear metrics, input for how to measure success and diversity.	Contributor Profiles Contribution types and ideal contributors Statisticians, sociologists, computer programmers.	Contributor Channels Talk about the difficulty and impact of the methods I want to use
